STSM Title: Preparation of a crowdsourcing experiment within the purview of the "Learning materials through crowdsourcing: teachers, perspectives & scenarios" workshop for WG1

Guest/STSM applicant: Jaka Čibej, University of Ljubljana, Slovenia

During his stay, Jaka, in collaboration with Elena Volodina and David Alfter from Språkbanken, University of Gothenburg, has prepared data for the crowdsourcing experiment. In addition, he has set up the crowdsourcing task is the crowdsourcing platform PyBossa using an installation at the University of Ljubljana. During meetings, we discussed how to structure the data for presentation and how to set up the experiment. We also talked about how to analyze the results and derive a linear ranking from binary preferential ratings.

The data collected will be analyzed further by the STSM applicant and host and results will be presented during the WG1 hands-on workshop in December in Gothenburg.

To conclude, Jaka's STSM was very successful and not only resulted in the main aim of setting up a crowdsourcing task but also led to many fruitful conversations and ideas that will be further explored in the future.
